Section 7.4.1: Improper Integrals over Unbounded Intervals

Let f be continuous on the intervals given below

1.) $\int_a^{\infty} f(x) dx = \lim_{t \rightarrow \infty} \int_a^t f(x) dx$ ($t \neq \infty, -\infty, t > a$)

2.) $\int_{-\infty}^b f(x) dx = \lim_{t \rightarrow -\infty} \int_t^b f(x) dx$ ($t \neq \infty, -\infty, t \leq b$)

3.) $\int_{-\infty}^{\infty} f(x) dx = \int_{-\infty}^a f(x) dx + \int_a^{\infty} f(x) dx$

Definition: We say an improper integral is convergent if the limit(s) exist and is (are) finite, otherwise the improper integral is divergent.

Ex: We found that the improper integral

$\int_3^{\infty} 2/x^3 dx$ is convergent.

Consider $\int_a^{\infty} \frac{1}{x^p} dx$ for $p > 0$. Let's see

for which values of $p, p > 0$ such improper integrals are divergent or convergent. ($f(x) = \frac{1}{x^p}, p > 0$ is continuous on $[a, \infty)$)

$\int_a^{\infty} \frac{1}{x^p} dx = \lim_{t \rightarrow \infty} \int_a^t \frac{1}{x^p} dx$ ($p > 0, t \geq a \neq \infty, -\infty$)

$\lim_{t \rightarrow \infty} \frac{t^{-p+1}}{-p+1} \Big|_a^t$ $0 < p < 1, \lim_{t \rightarrow \infty} \ln|x| \Big|_a^t$ $p = 1$ ∞

$\lim_{t \rightarrow \infty} \frac{t^{-p+1}}{-p+1} \Big|_a^t$ $p > 1$

$0 < p < 1, \lim_{t \rightarrow \infty} \left(\frac{t^{-p+1}}{-p+1} - \frac{a^{-p+1}}{-p+1} \right) = \lim_{t \rightarrow \infty} \frac{t^{-p+1}}{-p+1} - \frac{a^{-p+1}}{-p+1} = \infty$ ∞

$p = 1, \lim_{t \rightarrow \infty} (\ln|t| - \ln|a|) = \lim_{t \rightarrow \infty} \ln|t| - \ln|a| = \infty$

$p > 1, \lim_{t \rightarrow \infty} \left(\frac{t^{-p+1}}{-p+1} - \frac{a^{-p+1}}{-p+1} \right) = \lim_{t \rightarrow \infty} \frac{t^{-p+1}}{-p+1} - \frac{a^{-p+1}}{-p+1} = \frac{0}{-p+1} - \frac{a^{-p+1}}{-p+1} = \frac{a^{-p+1}}{p-1}$ ∞

$\lim_{t \rightarrow \infty} \frac{t^{-p+1}}{-p+1} - \frac{a^{-p+1}}{-p+1} = \infty$ ($0 < p < 1, \& p = 1$ are divergent)

$-\frac{a^{-p+1}}{-p+1} < \infty$

Result: The improper integral $\int_a^{\infty} \frac{1}{x^p} dx$, where $f(x)$ is continuous on $[a, \infty)$ is convergent when $p > 1$ and divergent when $0 < p \leq 1$.

Ex: Determine whether the improper integral is convergent or divergent & calculate value if it is convergent.

1.) $\int_2^{\infty} 3x^{-2} dx = 3 \int_2^{\infty} x^{-2} dx = 3 \int_2^{\infty} \frac{1}{x^2} dx$

a.) $f(x) = 1/x^2$ is continuous on $[2, \infty)$.

b.) Since $p = 2 > 1, 3 \int_2^{\infty} \frac{1}{x^2} dx$ is convergent

c.) $\int_2^{\infty} 3x^{-2} dx = 3 \lim_{t \rightarrow \infty} \int_2^t x^{-2} dx = 3 \lim_{t \rightarrow \infty} \left. -\frac{1}{x} \right|_2^t = 3 \lim_{t \rightarrow \infty} \left(-\frac{1}{t} + \frac{1}{2} \right) = 3 \left(0 + \frac{1}{2} \right) = \frac{3}{2}$

$$2. \int_{-\infty}^{\infty} 4x^3 e^{-x^4} dx = \int_{-\infty}^1 4x^3 e^{-x^4} dx + \int_1^{\infty} 4x^3 e^{-x^4} dx$$

a.) is continuous on $(-\infty, \infty)$

consider $\int_{-\infty}^1 4x^3 e^{-x^4} dx = \lim_{t \rightarrow -\infty} \int_{-\infty}^1 4x^3 e^{-x^4} dx$ ($u = -x^4$
 $du = -4x^3 dx$)

$\lim_{t \rightarrow -\infty} \int_{-\infty}^1 e^u du$ $x \rightarrow \infty$ $\lim_{x \rightarrow \infty} x^2 = \infty$ $x \rightarrow -\infty$ $\lim_{x \rightarrow -\infty} x^2 = \infty$

If $x = t, u = -t^4$ If $x = 1, u = -1$

$x \rightarrow \infty, u \rightarrow -\infty$ $x \rightarrow -\infty, u \rightarrow -\infty$

if the integrand is continuous on $(-\infty, \infty)$ and the integral converges, then the integral is divergent.

if the integrand is continuous on $(-\infty, \infty)$ and the integral is divergent, then the integral is divergent.

if the integrand is continuous on $(-\infty, \infty)$ and the integral is divergent, then the integral is divergent.

if the integrand is continuous on $(-\infty, \infty)$ and the integral is divergent, then the integral is divergent.

$(-\infty, \infty) \neq (-\infty, \infty)$ $x \rightarrow \infty, u \rightarrow -\infty$ $x \rightarrow -\infty, u \rightarrow -\infty$

$\lim_{x \rightarrow \infty} \frac{1}{x} = 0$ $\lim_{x \rightarrow -\infty} \frac{1}{x} = 0$

$\lim_{x \rightarrow \infty} \frac{1}{x^2} = 0$ $\lim_{x \rightarrow -\infty} \frac{1}{x^2} = 0$

$\lim_{x \rightarrow \infty} \frac{1}{x^3} = 0$ $\lim_{x \rightarrow -\infty} \frac{1}{x^3} = 0$

$\lim_{x \rightarrow \infty} \frac{1}{x^4} = 0$ $\lim_{x \rightarrow -\infty} \frac{1}{x^4} = 0$

if the integrand is continuous on $(-\infty, \infty)$ and the integral is divergent, then the integral is divergent.

if the integrand is continuous on $(-\infty, \infty)$ and the integral is divergent, then the integral is divergent.

if the integrand is continuous on $(-\infty, \infty)$ and the integral is divergent, then the integral is divergent.

if the integrand is continuous on $(-\infty, \infty)$ and the integral is divergent, then the integral is divergent.

if the integrand is continuous on $(-\infty, \infty)$ and the integral is divergent, then the integral is divergent.
