

1. What are pluripotent cells?

Pluripotent cells are cells with the ability to create all of the body's many cell lineages (Derived from the first video in the playlist of StemCellTV videos).

2. What is one disease pluripotent cells could help treat?

One disease that pluripotent cells could help treat is Age-related Macular Degeneration (AMD).

3. What source(s) did you use for an example of disease that can be treated with pluripotent cells?
