

Complete the Ethics Game Hot Topics Simulation “The Case of the Compromised Contract” and “The Case of the Shared Seat,” located on the student website.

On the case of the comprised contract I made the decision to sign the contract even though we didn't have the budget. I was taking a risk and I know what would happen if we didn't get the budget. I am the type of person who would take risk sometimes to get a job done. The job still got done but I had a gut feeling that the funding would eventually come. So I took all responsibilities for my actions if something went wrong with the contract.

On the case of the shared seat I think I made the wrong decision on the exercise. I chose to bring the directors together to talk about why people are handling more accounts on my findings. I wouldn't have done that because that is not letting everyone who needs to know about what was going on with the accounts know. By just letting the directors know is not right because they could keep everything to themselves and not tell anyone else about what was going on. I would want the right people to know so that my company wouldn't be blamed for what went on. My company found the mistake about someone handling another person account and I think everyone that needed to know should know.

I like doing this exercise because it showed me what type of person I would actually be in the business world. I wouldn't want to jeopardize my job but I know sometimes you have to take some risk to get things done.

Response 2

On the case dealing the compromised contract was very interesting. By taking the risk of doing a job without a budget in kind of ridiculous thing to do. Also making a promise that you cannot keep is not a good idea. A lot the time you want to keep work relationship with but also want to keep work relationships with people but you have to keep those ethic values in tat. Sometimes a company will want to get the work without providing a warranty of work done.

I am currently in the Army and we recently moved in to a new building. We upgrade to a new technology with IP phones and Video Teleconference abilities. After the contract was finished there has been so many problems. These problems arrange from poor set up to fiber cable that are not transmitting data. Some of the issues have been resolved but others are a constant

fight to get fixed. Most the time it hard to get contractors to do anything that is not in the contract. Now the Army find itself spending more unnecessary funds on thing that should have been outline in the contract in the beginning. Then it becomes a headache when you find another company to company to fix another company's job
