

# Diabetes

Saturday, December 6, 2014  
6:38 PM

## Learning Objectives:

- actions of insulin with reference to glucose, fat, & protein metabolism
- counter-regulatory hormones
- actions of glucagon, epinephrine, GH, & glucocorticoids on blood glucose
- role of incretin in glucose regulation
- pathophysiology & clinical presentation of DM1 vs. DM2
- diagnosis of DM
- lab values of IFG vs. IGT vs. DM
- risk factors for DM2
- Hb A1c goal
- when a pregnant woman should be screened for DM/gestational DM
- complications of gestational DM on mother and fetus
- causes & diagnosis & clinical manifestation of DKA & HHS
- microvascular & macrovascular complications of DM

## Endocrine System

- feedback regulation
- hormones (free vs. bound)
- receptors (R, α/β, etc)

Hormone	Cell Source
I/A	β
G	α
GLP1	L
GIP	K

## Glucose Regulators

- I/A
- GLP1/GIP
- G
- GH
- E (Catecholamines)
- Cortisol (Glucocorticoids)

COUNTER-REGULATORY HORMONES

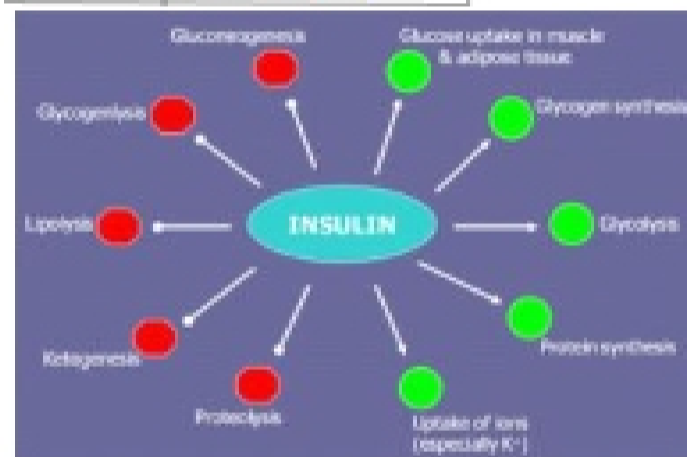

State	I, G/E	Main Process	Glucose Source
Fed	↑I, ↓G/E	Glycolysis	diet
Overnight Fast (<24 hrs)	↓I, ↑G/E	Glycogenolysis	Glycogen
Prolonged Fasting (>24hrs)	↓I, ↑G/E	GNG	AAs
Starvation	↓I, ↑G/E	Ketogenesis	FAs
Stress (E, Cortisol, GH)	↓I, ↑G/E		

Glucose (+) I/A, GLP1/GIP  
(-) G/E

Fed	I/A	Builds up	↓Glucose/↑Glycogen	↓AA/↑Protein	↓KB/↓FA/↑TG	↑ATP
Fasting	G/E	Breaks down	↑Glucose/↓Glycogen	↑AA/↓Protein	↑KB↑FA/↓TG	↓ATP

## Insulin Effects

↓Ions (K <sup>+</sup> )	↑uptake
↓Glucose	↑GLUT-4 uptake (w/A)
↓AAs	↑Proteins ↓Proteolysis
↓KBs/FAs	↑LPL ↓Lipolysis (HSL)

GLUT-4 - Insulin-dependent glucose transporter

PROINSULIN = Insulin + C-Peptide (β-cells)

INSULIN - (in response to glucose)

AMYLIN - secreted w/Insulin (in response to glucose)

INCRETINS (GLP1/GIP) - ↑Insulin (in response to glucose)

DPP4 - quickly kills Incretins

## Fed

A	↓G, slows stomach emptying, satiety
GLP1	↑I, ↓G, slows stomach emptying, satiety
GIP	↑I

## Stress

E (Catecholamines)	↓I, ↑G	mins
Cortisol (Glucocorticoids)	↑G	hours
GH	↑G	hours

## Types of DM

- DM1/2
- Disease
- Drug
- GDM
- MODY
- Pre-DM: (IFG/IGT)

GDM = Gestational DM

MODY = Maturity Onset DM of Youth

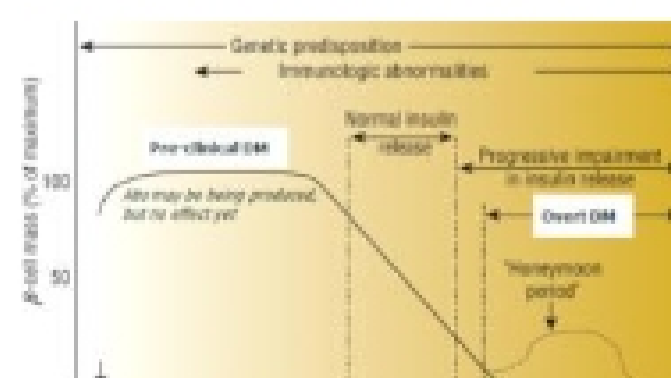

IFG = Impaired Fasting Glucose

IGT = Impaired Glucose Tolerance

## Epidemiology

\*28% do not know they have DM

	DM1 (5-10%)	DM2* (90-95%)												
Age	<30	>30												
Onset	Acute	Gradual												
Body Type	Lean	Obese												
Pathophysiology	<p>- β-cell destruction (NO Insulin)</p> <p>1) <b>AUTOIMMUNE</b> - cell-mediated, genetic, environmental</p> <p><b>Targets:</b></p> <ul style="list-style-type: none"> <li>- Islet-cell (ICA)*</li> <li>- Glutamic Acid Decarboxylase (GAD)</li> <li>- Tyrosine Phosphatase-related islet antigen (IA2)</li> <li>- Insulin (I)</li> </ul> <p>2) <b>LADA</b> - autoimmune; failure of oral meds. needs Insulin</p> <p>3) <b>IDIOPATHIC</b> - NOT autoimmune (Africans, Asians)</p>	<p>- β-cell dysfunction (↓Insulin)</p> <p>1) ↓1st ↑2nd-phase release</p> <p>2) <b>Degeneration:</b></p> <ul style="list-style-type: none"> <li>- age</li> <li>- genetic</li> <li>- Glucotoxicity</li> <li>- Lipotoxicity</li> <li>- Insulin-Resistance</li> <li>- ↓Incretins</li> </ul> <p>3) <b>Long-term Insulin-Resistance:</b></p> <table border="1"> <thead> <tr> <th>I</th> <th>Glucose</th> </tr> </thead> <tbody> <tr> <td>high</td> <td>&lt;140</td> </tr> <tr> <td>low</td> <td>&gt;140</td> </tr> </tbody> </table> <p>- Insulin-Resistance (obesity, metabolic syndrome)</p> <table border="1"> <tbody> <tr> <td>Liver</td> <td>↑Glucose</td> </tr> <tr> <td>Muscle*</td> <td>↓in the cellular insulin signaling</td> </tr> <tr> <td>Adipose</td> <td>↑FAs ↓Adiponectin</td> </tr> </tbody> </table> <p>- ↑G</p>	I	Glucose	high	<140	low	>140	Liver	↑Glucose	Muscle*	↓in the cellular insulin signaling	Adipose	↑FAs ↓Adiponectin
I	Glucose													
high	<140													
low	>140													
Liver	↑Glucose													
Muscle*	↓in the cellular insulin signaling													
Adipose	↑FAs ↓Adiponectin													

## Disease-Induced DM

Endo	?	- Cushing's - Acromegaly
Exo	Pancreas	- Pancreatitis - Cystic Fibrosis

## Drug-Induced DM

- Corticosteroids
- Niacin
- Olanzapine

## GDM

Screening: 24-28 wks

1-Step	2hr 75g OGTT after <u>fast</u>	FPG > 92 1hr > 180 2hr > 135
2-Step	1hr 50g OGTT after <u>fast</u> + 2hr 100g OGTT after <u>fast</u>	50 > 140 1hr > 140

## Risks:

Mother	- HTN - DM (postpartum)
Fetus	- ↑Insulin

		<table border="1"> <tr><th>I</th><th>Glucose</th></tr> <tr><td>high</td><td>&lt;140</td></tr> <tr><td>low</td><td>&gt;140</td></tr> </table>	I	Glucose	high	<140	low	>140
I	Glucose							
high	<140							
low	>140							
		<p>- Insulin-Resistance (obesity, metabolic syndrome)</p> <table border="1"> <tr><td>Liver</td><td>↑ Glucose</td></tr> <tr><td>Muscle*</td><td>↓ intracellular insulin signaling</td></tr> <tr><td>Adipose</td><td>↑ FFA ↓ Adiponectin</td></tr> </table> <p>- ↑ G - ↓ GLP1/GIP</p>	Liver	↑ Glucose	Muscle*	↓ intracellular insulin signaling	Adipose	↑ FFA ↓ Adiponectin
Liver	↑ Glucose							
Muscle*	↓ intracellular insulin signaling							
Adipose	↑ FFA ↓ Adiponectin							
Clinical Manifestations	<ul style="list-style-type: none"> <li>- lethargy</li> <li>- polyuria (frequent urination)</li> <li>- polydipsia (thirst)</li> <li>- polyphagia (↑ appetite)</li> <li>- weight loss</li> <li>- DKA</li> </ul>	<ul style="list-style-type: none"> <li>- asymp</li> <li>- lethargy</li> <li>- polyuria (frequent urination)</li> <li>- polydipsia (thirst)</li> <li>- nocturia</li> <li>- blurred vision</li> <li>- dry skin</li> </ul>						
Screening		<table border="1"> <tr> <td> <p>45+ yrs BMI &gt;25 + Risk Factor:</p> <ul style="list-style-type: none"> <li>- stagnant</li> <li>- 1st/2nd relative w/DM</li> <li>- AA, LaTino, Native, Asian, Pacific Islander</li> <li>- postpartum GDM/ODM</li> <li>- HTN, Lipids, PCOS</li> <li>- ↓ HDL, ↑ TG</li> <li>- A1c &gt;5.7%, IFG, IGT</li> <li>- CVD</li> </ul> </td> <td>every 3 yrs</td> </tr> <tr> <td> <p>10+ yr + BMI &gt;85th percentile + 2 Risk Factors:</p> <ul style="list-style-type: none"> <li>- 1st/2nd relative w/DM2</li> <li>- AA, LaTino, Native, Asian, Pacific Islander</li> <li>- HTN, Lipids, PCOS</li> <li>- maternal DM/ODM</li> </ul> </td> <td>every 3 yrs</td> </tr> </table>	<p>45+ yrs BMI &gt;25 + Risk Factor:</p> <ul style="list-style-type: none"> <li>- stagnant</li> <li>- 1st/2nd relative w/DM</li> <li>- AA, LaTino, Native, Asian, Pacific Islander</li> <li>- postpartum GDM/ODM</li> <li>- HTN, Lipids, PCOS</li> <li>- ↓ HDL, ↑ TG</li> <li>- A1c &gt;5.7%, IFG, IGT</li> <li>- CVD</li> </ul>	every 3 yrs	<p>10+ yr + BMI &gt;85th percentile + 2 Risk Factors:</p> <ul style="list-style-type: none"> <li>- 1st/2nd relative w/DM2</li> <li>- AA, LaTino, Native, Asian, Pacific Islander</li> <li>- HTN, Lipids, PCOS</li> <li>- maternal DM/ODM</li> </ul>	every 3 yrs		
<p>45+ yrs BMI &gt;25 + Risk Factor:</p> <ul style="list-style-type: none"> <li>- stagnant</li> <li>- 1st/2nd relative w/DM</li> <li>- AA, LaTino, Native, Asian, Pacific Islander</li> <li>- postpartum GDM/ODM</li> <li>- HTN, Lipids, PCOS</li> <li>- ↓ HDL, ↑ TG</li> <li>- A1c &gt;5.7%, IFG, IGT</li> <li>- CVD</li> </ul>	every 3 yrs							
<p>10+ yr + BMI &gt;85th percentile + 2 Risk Factors:</p> <ul style="list-style-type: none"> <li>- 1st/2nd relative w/DM2</li> <li>- AA, LaTino, Native, Asian, Pacific Islander</li> <li>- HTN, Lipids, PCOS</li> <li>- maternal DM/ODM</li> </ul>	every 3 yrs							

Screening: 24-28 wks

1-Step	2hr 75g OGTT after [fast]	PG > 92 1hr > 180 2hr > 155
2-Step	1hr 50g OGTT after [fast] + 2hr 100g OGTT after [fast]	PG > 140 50 > 140 1hr > 140

Risks:

Mother	- HTN - DM (postpartum)
Fetus	- ↑ insulin - ↑ birth weight (macrosomia) - fetal death

**MODY**  
- ↓ Insulin (w/ insulin-Resistance)  
- genetic

**Pre-DM (IFG/IGT)**  
\*should be tested yearly

**Diagnosis**

	Fasting PG	Random PG	2hr Post-OGTT	A1c
---	70-100	<140	<140	<5.7
IFG	100-125	<140	<140	5.7-6.4
IGT	70-100	140-199	140-199	5.7-6.4
DM	126+	200+	200+	6.5+ (goal <7)

**COMPLICATIONS**

DKA = Diabetic Ketoacidosis  
HHS = Hyperosmolar Hyperglycemic State

**Acute**

	DKA (Biochem Triad)	HHS										
Causes	<ul style="list-style-type: none"> <li>- untreated DM</li> <li>- Pancreatitis</li> <li>- Stroke (CVA)</li> <li>- MI</li> <li>- Infection</li> <li>- meds</li> </ul>	<ul style="list-style-type: none"> <li>- untreated DM</li> <li>- Pancreatitis</li> <li>- Stroke (CVA)</li> <li>- MI</li> <li>- Infection</li> <li>- meds</li> </ul>										
Clinical Manifestation	<table border="1"> <tr> <th>Symptoms</th> <th>Physical Findings</th> </tr> <tr> <td> <ul style="list-style-type: none"> <li>- polyuria (frequency)</li> <li>- polydipsia (thirst)</li> <li>- dehydration</li> <li>- weak</li> <li>- Δ mental status</li> <li>- coma</li> <li>- weight loss</li> <li>- N/V</li> <li>- abdominal pain</li> </ul> </td> <td> <ul style="list-style-type: none"> <li>- poor turgor</li> <li>- ↑ HR</li> <li>- HoTN</li> <li>- Kussmaul respirations</li> <li>- shock</li> </ul> </td> </tr> </table> <p>Biochem Triad: 1) Hyperglycemia 2) Ketonemia 3) Metabolic Acidosis</p>	Symptoms	Physical Findings	<ul style="list-style-type: none"> <li>- polyuria (frequency)</li> <li>- polydipsia (thirst)</li> <li>- dehydration</li> <li>- weak</li> <li>- Δ mental status</li> <li>- coma</li> <li>- weight loss</li> <li>- N/V</li> <li>- abdominal pain</li> </ul>	<ul style="list-style-type: none"> <li>- poor turgor</li> <li>- ↑ HR</li> <li>- HoTN</li> <li>- Kussmaul respirations</li> <li>- shock</li> </ul>	<table border="1"> <tr> <th>Symptoms</th> <th>Physical Findings</th> </tr> <tr> <td> <ul style="list-style-type: none"> <li>- polyuria (frequency)</li> <li>- polydipsia (thirst)</li> <li>- dehydration</li> <li>- weak</li> <li>- Δ mental status</li> <li>- coma</li> </ul> </td> <td> <ul style="list-style-type: none"> <li>- poor turgor</li> <li>- ↑ HR</li> <li>- HoTN</li> </ul> </td> </tr> </table>	Symptoms	Physical Findings	<ul style="list-style-type: none"> <li>- polyuria (frequency)</li> <li>- polydipsia (thirst)</li> <li>- dehydration</li> <li>- weak</li> <li>- Δ mental status</li> <li>- coma</li> </ul>	<ul style="list-style-type: none"> <li>- poor turgor</li> <li>- ↑ HR</li> <li>- HoTN</li> </ul>
