

CSE 452: Programming Languages

Lecture 8

9/18/2003

Outline

- ◆ Control Structures
 - Selection Statements
 - Iterative Statements
 - Unconditional Branches

- ◆ Subprograms and Procedures

Iterative Statements

- ◆ Repeated execution of a statement or compound statement
 - accomplished either by iteration or recursion;
 - here we look at iteration, because recursion is a unit-level control (e.g., using functions)

- ◆ General design issues for iteration control statements:
 1. How is the iteration controlled?
 - ✧ Counter-controlled vs logical-controlled

 2. Where should the control mechanism appear in the loop?
 - ✧ pretest (before loop body is executed) vs posttest (after loop body is executed)
