Unix System Administration

Chris Schenk
Lecture 05 – Tuesday Jan 29

CSCI 4113, Spring 2008

Your Arsenal of Tools

- Logs! - But you have to understand them
- Command piping
  - Send `stdout` of one program to another's `stdin`
- `grep` – Find matching patterns in text
- `last` – See who last logged in
  - And the date and their IP address
- `find` – Find files owned by a user
- `lsof` – LiSt Open Files
  - Everything in unix/linux is a file!!

Command Piping

- Redirecting STDOUT of one program to STDIN of another
- Gives you the ability to chain many commands together to accomplish a task
- Create a ghost image and store it remotely:
  -
