

MATH 2339, HW14: Solution

(14)

§11.3

8/ (2)  $f(x, y) = x^4 y^3 + 8x^2 y$

$f_x(x, y) = 4x^3 y^3 + 16xy$  (1)

$f_y(x, y) = x^4 \cdot 3y^2 + 8x^2 = 3x^4 y^2 + 8x^2$  (1)

9/ (2)  $f(x, t) = e^{-t} \cos \pi x$

$f_x(x, t) = e^{-t} (-\sin \pi x) \cdot \pi = -\pi e^{-t} \sin \pi x$  (1)

$f_t(x, t) = -e^{-t} \cos \pi x$  (1)

10/ (2)  $f(x, t) = \sqrt{x} \ln t$

$f_x(x, t) = \frac{1}{2} x^{-\frac{1}{2}} \ln t = \frac{\ln t}{2\sqrt{x}}$  (1)

$f_t(x, t) = \sqrt{x} \cdot \frac{1}{t} = \frac{\sqrt{x}}{t}$  (1)

49/ (4)  $x^2 - y^2 + z^2 - 2z = 4$

$\frac{\partial}{\partial x} (x^2 - y^2 + [z(x, y)]^2 - 2[z(x, y)]) = 0$

steps (1)

$\Rightarrow 2x + 0 + 2z \frac{\partial z}{\partial x} - 2 \frac{\partial z}{\partial x} = 0$

$\Rightarrow (2z - 2) \frac{\partial z}{\partial x} = -2x \Rightarrow \frac{\partial z}{\partial x} = \frac{-2x}{2z - 2} = \frac{x}{z - 1}$  (1)

$\frac{\partial}{\partial y} (x^2 - y^2 + [z(x, y)]^2 - 2[z(x, y)]) = 0$

steps (1)

$\Rightarrow 0 - 2y + 2z \frac{\partial z}{\partial y} - 2 \frac{\partial z}{\partial y} = 0$

$\Rightarrow (2z - 2) \frac{\partial z}{\partial y} = 2y \Rightarrow \frac{\partial z}{\partial y} = \frac{2y}{2z - 2} = \frac{y}{z - 1}$  (1)

$$41/ \quad e^z = xy z$$

$$(4) \quad \frac{\partial}{\partial x} [e^{z(x,y)}] = \frac{\partial}{\partial x} [xy z(x,y)]$$

$$\Rightarrow e^z \cdot \frac{\partial z}{\partial x} = y \frac{\partial}{\partial x} [x \cdot z(x,y)] = y \left[ x \frac{\partial z}{\partial x} + z \right] = xy \frac{\partial z}{\partial x} + yz$$

$$\Rightarrow (e^z - xy) \frac{\partial z}{\partial x} = yz \quad \checkmark \text{ steps } (1)$$

$$\Rightarrow \frac{\partial z}{\partial x} = \boxed{\frac{yz}{e^z - xy}}$$

$$\frac{\partial}{\partial y} [e^{z(x,y)}] = \frac{\partial}{\partial y} [xy z(x,y)]$$

$$\Rightarrow e^z \frac{\partial z}{\partial y} = x \frac{\partial}{\partial y} [y z(x,y)] = x \left[ y \frac{\partial z}{\partial y} + z \right] = xy \frac{\partial z}{\partial y} + xz$$

$$\Rightarrow (e^z - xy) \frac{\partial z}{\partial y} = xz \quad \checkmark \text{ steps } (1)$$

$$\Rightarrow \frac{\partial z}{\partial y} = \boxed{\frac{xz}{e^z - xy}}$$
