

Last Time

- Color
 - Transforming between two color spaces
 - A *gamut* is the set of displayable colors in a color space
 - A *perceptually uniform* allows you to reasonably compare local color distances
 - Printers use subtractive color
- Image Files
 - Must store at least width/height/pixels
 - Indexed color uses a color table to reduce the cost of storing the image, but can show fewer colors in a single image

Today

- JPEG images
- Color quantization
- Dithering
- Homework 1 due, here, now
