Overview

- What is AJAX ?
- Why AJAX ?
- AJAX Vs Classical Web Approach.
- How AJAX Works ?
- XMLHttpRequest ?
- How to make an AJAX application ?
- Live AJAX Examples.

What is AJAX ?

- Ajax isn't a new technology or programming language.
- It is a technique used to develop interactive web applications that are able to process a user request immediately.
- Ajax can selectively modify a part of a page displayed by the browser, and update it without the need to reload the whole document with all images, menus, etc.
