

### **Tutorial to install tom cat web server.**

Tomcat server supports java of versions 1.4.2 or higher.

1. First install java before the installation of tomcat server, say we are installing our java in the operating system drive with a separate folder.

2. Then proceed to Java installation (here we are installing j2sdk1.4.2)

3. Click on the j2sdk-1\_4\_2-win file and allow java to be installed (this may take some minutes)

4. After the installation of java we need to set the path for java in the following way:(for XP)

1. Right click on the my computer
2. Click on the properties
3. Click on the advanced
4. Then on the environment variables

Set the variables

Classpath and path as shown below

click on the ok button
