

# **ANDROID VS. IPHONE (OS WAR)**

# Background

- iPhone came out first and had more time to develop. (3G)
- Also was developed using OS-X
- Android was started as a mobile device OS acquired by google. (2005)
- Came out in 2007 on poorer hardware (G1)

# Hardware

- iPhone is locked down only controlled by apple
- Apple changes the hardware and has control over any of the software to go along with it
- Allowing a cleaner view of versions
  
- Android is made portable for any hardware you wish to try to make it work on.
- The base OS version at the time is what is modified by phone makers
- No clear versions for OS to develop for!!
  
- Advantage: Android
