Infrared Keyless Entry

Final Presentation

Senior Design II

November 27, 2001

Mississippi State University

Department of Electrical and Computer Engineering

Abstract

- Design an interface to allow entry without keys.
- Radio Frequency Keyless Entry (RFKE) does not provide flexible interaction between automobiles and external communication devices.
- Infrared technology integrated with keyless entry will provide alternate access to automobile.
- Devices such as laptops and palm pilots with infrared ports will be able to access the system.
