- Introduction
- Ground rules
- True/False basics
- Quick history of The Pill
- LARCs
- Questions
- Resources

TRUE OR FALSE:

A woman releases an egg
during menstruation

A woman releases an egg
during menstruation

FALSE

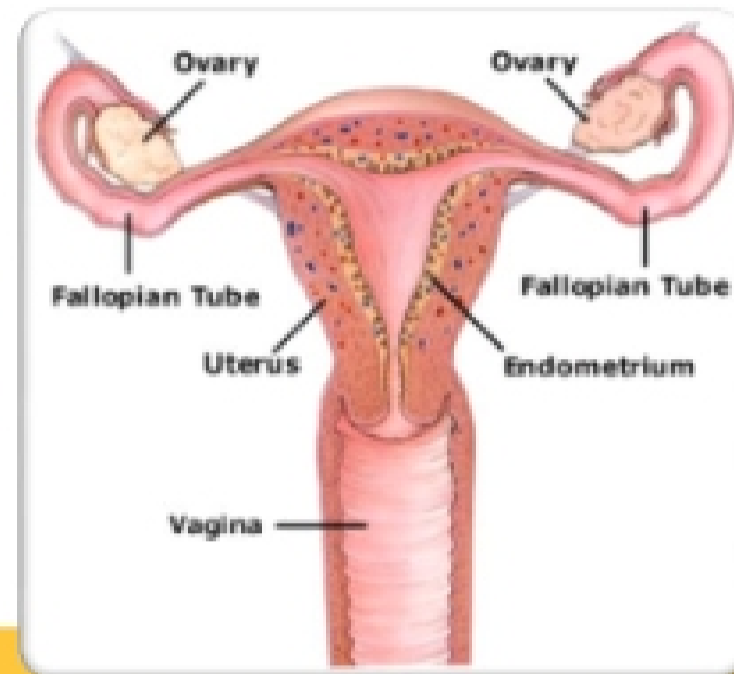

menstruation

ovulation

MENSTRUATION

- Ovaries produce two hormones
 - estrogen and progesterone
- If the egg is not fertilized, the egg begins to fall apart and the uterine lining breaks down and is shed - this bleeding is what's known as the period

TRUE OR FALSE:

Using birth control decreases future fertility
