

CSCI 5582

Artificial Intelligence

Lecture 14
Jim Martin

CSCI 5582 Fall 2006

Today 10/17

- Review basics
- More on independence
- Break
- Bayesian Belief Nets

CSCI 5582 Fall 2006

Review

- Joint Distributions
- Atomic Events
- Independence assumptions

CS/C1 5582 Fall 2006

Review: Joint Distribution

	Toothache=True	Toothache=False
Cavity True	0.04	0.06
Cavity False	0.01	0.89

•Each cell represents a conjunction of the variables in the model.

CS/C1 5582 Fall 2006

Atomic Events

- The entries in the table represent the probabilities of **atomic events**
 - Events where the values of all the variables are specified

CSCI 5582 Fall 2006

Independence

- Two variables A and B are independent iff $P(A|B) = P(A)$. In other words, knowing B gives you no information about A .
- Or $P(A \wedge B) = P(A|B)P(B) = P(A)P(B)$
 - I.e. Two coin tosses

CSCI 5582 Fall 2006
