

Which of the following is a touch-sensitive device, resembling a dry-erase board, that displays the image on a connected computer screen?	Interactive whiteboard
Which of the following is a technology that reads hand-drawn marks such as small circles or rectangles?	OMR
Which of the following is a device that uses a light source to read characters, marks, and codes and then converts them into digital data that a computer can process?	Optical reader
Which kind of monitor sandwiches a layer of gas between two glass plates?	plasma
An important measure of LCD monitors is the time in milliseconds (ms) that it takes to turn a pixel on or off. What is this called?	Response time
Which of the following reads the magnetic stripe on the back of credit cards, entertainment cards, bank cards, and other similar cards?	Megastripe reader
The kind of mouse on the right in the accompanying figure is motion-sensing. What kind of mouse is this?	Touch
an instruction that causes a program or app to perform a specific action	command
Instead of reading or scanning data from a source document, which of the following kinds of devices obtain data directly at the location where the transaction or event takes place?	Data collection
Many retailers see the technology (like theta door key) as an alternative to bar codes because which of the following is true?	It does not require line-of-sight transmission.
Over time, which of the following is true of thermal printers?	They are inexpensive, but the print quality is low and the images tend to fade.
Which of the following is a pressure-sensitive input device that allows a user to control a pointer on the screen?	Pointing stick

To display the highest quality images, an LCD monitor should plug in which of the following?	Any of the above
Which of the following devices read text printed with magnetized ink?	MICR
What kind of mouse is a battery-powered mouse that sometimes uses Bluetooth technology to pair with the device?	Wireless
Which of the following is a touch-sensitive display device that users interact with by touching the screen with a finger or a stylus?	Touch screen
Which of the following is data that has been processed into a useful form?	Output
Which of the following kinds of scanners works in a manner similar to a copy machine except it creates a file of the document in memory instead of a paper copy?	Flatbed
Retail and grocery stores use which kind of bar code?	UPC (Universal Product Code)
Which of the following are NOT commonly used nonimpact printers?	line printers and dot-matrix printers
Which of the following describes the difference in light intensity between the brightest white and the darkest black that can be displayed on an LCD monitor?	Contrast ratio
A printer, such as that shown in the accompanying figure, creates images using a laser beam and powdered ink. What is this ink called?	Toner
Which of the following is a small, flat, rectangular pointing device that is sensitive to pressure and motion?	Touchpad
Which of the following use a row of charged wires to draw an electrostatic pattern on specially coated paper and then fuse toner to the pattern?	Plotters
What is pixel pitch sometimes called?	Dot pitch

What is the term for a motion you make on a touch screen with the tip of one or more fingers or your hand?	gesture
Most of these types of device include a small optical scanner for reading characters and sophisticated software to analyze what is read. What kind of device is this?	OCR
Some input devices include a kind of output that provides the user with a physical response from the device. What kind of output is this?	tactile
What kind of mouse, like the ones shown in the accompanying figure, uses devices that emit and sense light to detect movement?	optical
Which of the following is used almost exclusively by the banking industry for check processing?	MICR
Which of the following is an identification code that consists of a set of vertical lines and spaces of different widths?	barcode
Displays are geared for a specific resolution. What is this resolution called?	native
Which of the following kinds of printer is a small printer that prints on an adhesive-type material that can be placed on a variety of items such as envelopes, packages, optical discs, photos, and file folders?	label
Which of the following is a small, flat, rectangular pointing device that is sensitive to pressure and motion?	touchpad
Which of the following is a disadvantage of an all-in-one printer?	if the device breaks down, users lose all four functions
