

CSE 3302

Lecture 24: MapReduce

April 27, 2010

Nate Nystrom

UTA

- its = the third person, neuter, possessive pronoun
- it's = a contraction of "it is"

Task parallelism

- Intelligent task design eliminates as many synchronization points as possible, but some will be inevitable
- Independent tasks can operate on different physical machines in distributed fashion
- Good task design requires identifying common data and functionality to move as a unit
