

PHY 2054: Physics II

- HITT, please contact and inform in case of problems
- Hopefully all webassign problems have been solved. Please see me immediately after the class if there is still an issue.
- SI for T6 meeting, the room has been changed from MCCB 2102. New room MCCB 3108

PHY 2054: Physics II

- Some effects of potentials and potential energy.
- Parallel and Series configurations for capacitors.

HITT I

- An ion is released from rest and moves due to the force from an electric field from a position in the field having a potential of 14 V to a position having a potential of 8 V. The ion:
 - a. must have a positive charge.
 - b. must have a negative charge.
 - c. can have either a positive or a negative charge.
 - d. must be neutral.
