

# Today: Research Methods In Social Psychology (Chpt 1)

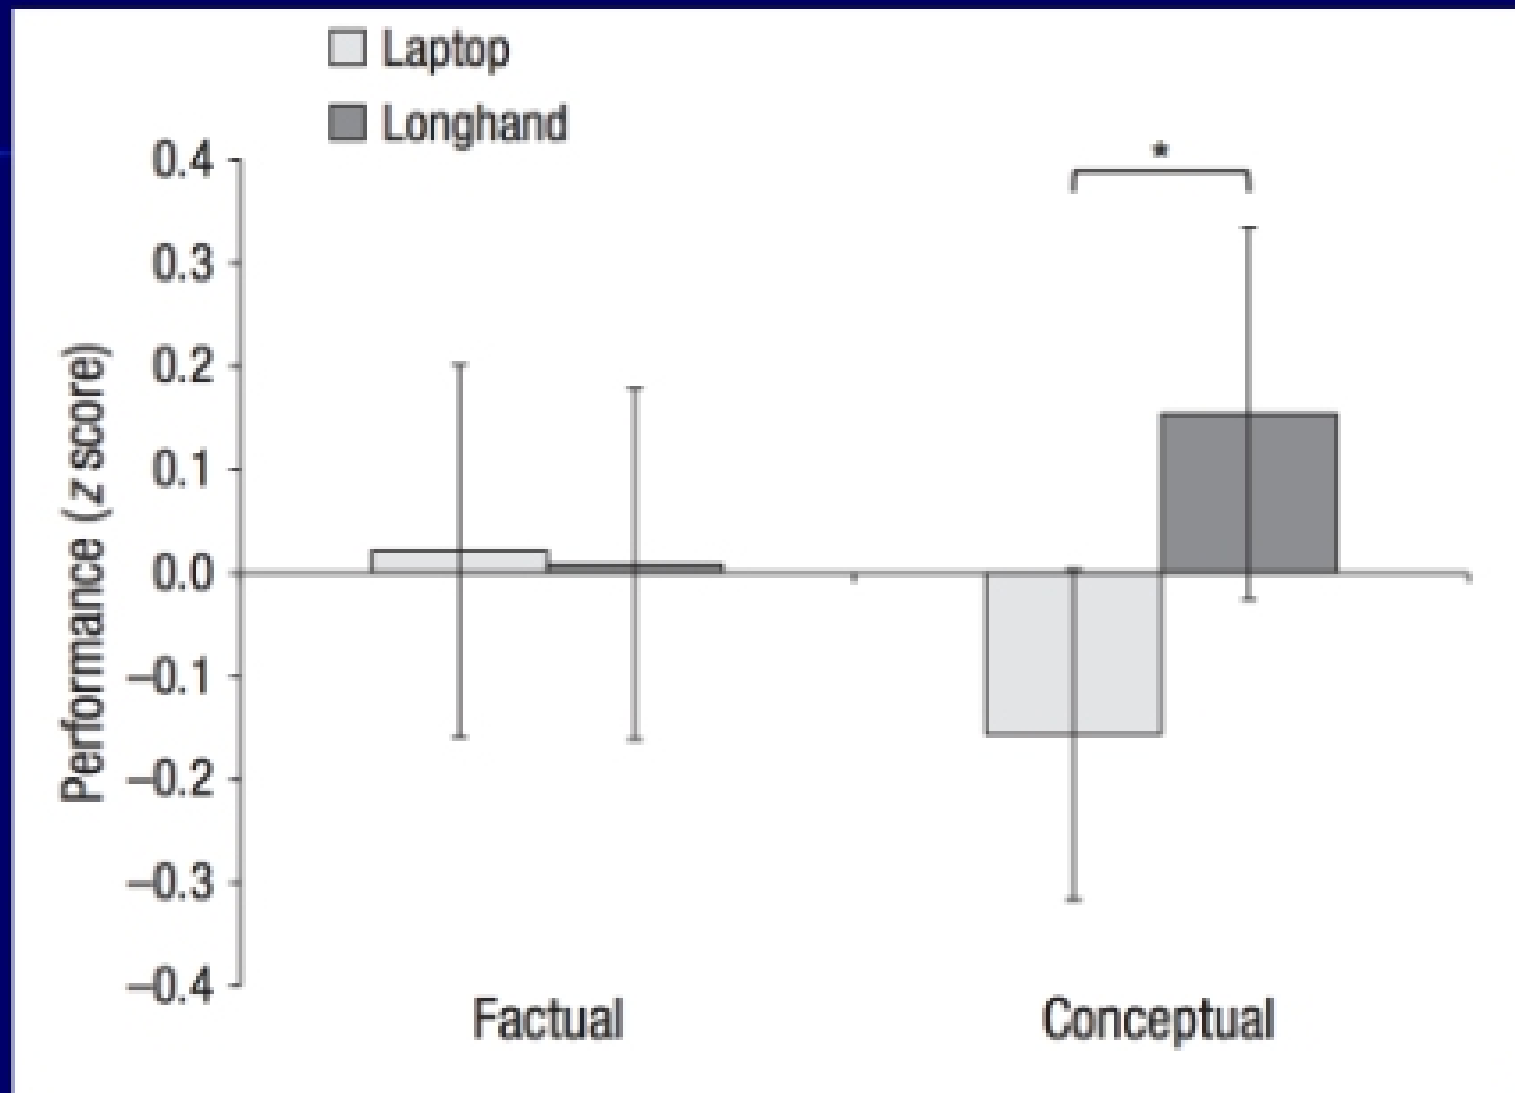

## But first: How to study!

1. Don't use laptops in class – take notes by hand (on PP hard copies).

Why? You have to actively listen for “important nuggets,” since you can't write everything down

You will be more engaged and less distracted (research shows 40% of time, students have something else up)

You will have more “deep conceptual learning” which is what I try to test for
