

Software Requirements

By Pete Sawyer

Presented by Ehsan Ghaneie
EEL6883 – Software Engineering II

Software Requirements

- Software requirements concern the specification of software systems
- Software systems are always derived from some business problem
- They are always embedded in an operational context
- They have interfaces to human users, business process elements, or other hardware/software systems

Software Requirements

- Derivation of software requirements can rarely be isolated from underlying business problem
- Software requirements are not a discrete area of software engineering
- They are part of the system engineering process known as requirements engineering
