Software as a Service

- **Get**
 - What you need
 - When you need it
- **Pay for**
 - What you use
- **Don't worry about**
 - Deployment, installation, maintenance, upgrades
 - Hire/train/retain people

Emerging trend: data outsourcing

- Database as a Service (**DBaaS**), why?
 - Most organizations need efficient data management
 - DBMSs are extremely complex to deploy, setup, and maintain
 - Require skilled DBAs (at very high cost!)
- Driven by faster, cheaper, and more accessible networks
