

Cool:gen

CIS 764, Fall 2007 Presentation

By Mandar Haridas

Outline

- ✧ What is Cool:gen?
- ✧ Why is it required?
- ✧ Comparison with Similar Products
- ✧ Features
- ✧ Conclusion

What is Cool:gen ?

- ❖ Model Driven Application Tool
- ❖ Supports development of web based applications, enterprise wide client-server applications as well as more traditional applications (mainframe)
- ❖ Enterprise-designed tool that generates code (e.g. ASP, JAVA, COBOL etc.) for the complete solution, including application logic, communications infrastructures, web servers, and browser interfaces.
- ❖ Maintenance occurs in the model's code (Information Engineering Facility IEF), not the generated code.
