

Sociology 3112-001**Introduction to Social Statistics**

Spring 2008

University of Utah

MWF 9:40 AM-10:30 AM, BEH S 116

Instructor: Vincent Kang Fu**Office:** 303 BEH S**Email:** vincent.fu@soc.utah.edu**Phone:** (801) 585-5930**Office hours:** after class and by appointment**Course website:** <http://www.soc.utah.edu/courses/soc3112>**Lab/teaching assistants**

To be announced—see class website.

TA office hours will be held in 420 BEH S.

Course summary

This course introduces students to the building blocks of traditional statistical inference in the context of social science. Statistics is a set of tools and techniques researchers use to describe and draw conclusions about the world. We begin by studying descriptive statistics including frequency distributions, and measures of central tendency and variability. We next study ways to describe relationships between variables, including measures of association and bivariate regression. Finally we study basic inferential statistics and learn how to use sample data to draw well-reasoned conclusions about the population.

Course requirements and grading

Class and lab attendance are important to success in this course. Failure to attend lectures or labs will result in a lower grade. To encourage class attendance, there will be several unannounced quizzes during the semester. These MAY NOT be made up, but I will drop your lowest quiz grade. You will also be graded on 3 exams. Prior approval is necessary to miss an exam and will only be given in extreme cases. Exams and quizzes are unique to each section of this course. You will receive no credit for taking quizzes or exams from the section in which you are not officially enrolled. Homework for each chapter (posted on the class website) will be due at the next class meeting after the lecture on each chapter is completed. Late homework will not be accepted, although you may miss one homework assignment without penalty. This course also includes a lab component where you will learn the mechanics of carrying out statistical analyses using a computer. Your final grade will be based on your homework assignments (15 percent), lab performance (15 percent), quizzes (20 percent), and 3 exams (50 percent).

Contact the teaching assistants or me **immediately** if you are having difficulty with any aspect of this course. Do not wait until the day before an exam to ask for help! By then it may be too late!

Texts

Frankfort-Nachmias, C. and A. Leon-Guerrero. 2005. *Statistics for a Diverse Society*. Fourth edition. Thousand Oaks, California: Pine Forge Press.

Kentor, J. 2004. *Exploring Social Inequality With Statistics*. Thomson Custom Publishing.

Americans with Disabilities Act (ADA)

The University of Utah seeks to provide equal access to its programs, services and activities for people with disabilities. If you will need accommodations in the class, reasonable prior notice needs to be given to the Center for Disability Services, 162 Olpin Union Building, 581-5020 (V/TDD). CDS will work with you and the instructor to make arrangements for accommodations.

All written information in this course can be made available in alternative format with prior notification to the Center for Disability Services.

Advice

Many of you may feel anxiety about learning material that requires math and equations. It would be dishonest to claim that statistics employs no math, but this course requires only the most elementary mathematics—arithmetic and very simple algebra. Do not be put off by this minimal math: You can do it!

It is a bad idea to fall behind in any course, but it is fatal to do so in this course. Understanding the topics covered in later weeks requires a good grasp of material covered in earlier weeks. Because we have a great deal of material to cover, this course is necessarily fast paced. Attend the lectures regularly and do the homework on time. If you miss classes, skip homework assignments, and cram for the exams, you will almost surely do poorly.

This is also not the kind of course in which it will be easy to bring your grade up at the end of the semester by studying extra hard for the last exam and later quizzes. The material we cover increases in difficulty as the semester progresses. Students usually find that the material covered in the beginning of the class is much more straightforward than the topics at the end of the semester. To improve chances of success in this course, you must buckle down at the beginning of the semester.

Academic honesty

If you are caught cheating on a quiz or exam—or helping someone else to cheat—you will receive a failing grade for the course. Other forms of academic misconduct will be dealt with accordingly. All instances of academic misconduct will be also referred to the Department Chair or Dean of the College. Don't do it! It's just not worth it!

Course outline and reading schedule

Note that this outline is tentative. Discussion and test dates may change.

January	7	Introduction & <u>Chapter 1: The What and Why of Statistics</u>
	9	
	11	<u>Chapter 2: Organization of Information: Frequency Distributions</u>
	14	
	16	<u>Chapter 3: Graphic Presentation & Chapter 4: Measures of Central Tendency</u>
	18	
	21	Martin Luther King Jr. Day
	23	<u>Chapter 5: Measures of Variability</u>
	25	
	28	
February	30	Review
	1	<u>Exam #1: Descriptive Statistics</u>
	4	<u>Chapter 6: Relationships Between Two Variables: Cross-Tabulation</u>
	6	
	8	
	11	<u>Chapter 7: Measures of Association for Nominal and Ordinal Variables</u>
	13	
	15	
	18	Presidents Day
	20	<u>Chapter 8: Regression and Correlation</u>
	22	
	25	
	27	<u>Review</u>
29	<u>Exam #2: Relationships Between Variables</u>	
March	3	<u>Chapter 9: The Normal Distribution</u>
	5	
	7	
	10	<u>Chapter 10: Sampling and Sampling Distributions</u>
	12	
	14	
	17	Spring break
	19	Spring break
	21	Spring break
	24	<u>Chapter 11: Estimation</u>
