

# MDS approximations for sparse similarity graphs

Elio Damaggio

May 3, 2007

*Paper presentation for CSE291f, Spring 2007  
University of California, San Diego*

- 1 Preliminaries
  - Motivation
  - Classical MDS review
- 2 MDS approximations
  - Main idea
  - Landmark MDS
  - FastMap
  - Complexity
- 3 LMDS and FastMap are Nystrom approximation
  - Nystrom approximation
  - LMDS
  - FastMap
- 4 Some results
- 5 References

# Our data

- In [1], the data is a big graph ( $> 267K$  nodes,  $> 3.22M$  edges) of similarities between songs and artists.
- We want to embed these data in order to perform interpolation (playlist generation)
- Also for visualization/compression
