Project Overview

- Complete a subset of the Ontology Project (Project Archive)
- Generate ontology from existing documentation
- Determine if it is possible to generate an Ontological classification (categories) from raw data characteristics
- Support flexibility to define a process that allows the ontology to be naturally extended as raw data is incorporated

Development Plan review

- Select subset of subject areas
 - Initially select limited subject area
 - Important to support reasonably quick review and analysis of results
 - Expand subject area iteratively if time permits
- Define characteristics associated with a subset of the raw data from the web site
 - Consider Processing of subject documentation
 - Natural Language
 - Indexing search with cross references
 - Consider simple keyword searches
