

Our first 64-bit ventures

How to remotely access our new
Core-2 Duo platforms for some
exploration and programming

Recall our system setup

You can login via the LAN

- From a classroom or CS Lab machine, you can use Linux 'ssh' command; e.g.:

```
$ ssh anchor07
```
- All of your files will be there, remotely mounted via the Network File System
- You can use the customary editors and compilers or assemblers, and you can execute your programs or shell-scripts
