

CISC181 Introduction to Computer Science

Dr. McCoy

Lecture 13
October 13, 2009

Repeated Slides

- Some of the following slides are repeated from lecture 8 – character strings/character arrays

Storing Strings in Character Arrays

- Character arrays may be initialized using a string literal:

```
Char name[ ] = "Jane";
```

Initializes the char array "name" to hold the individual characters J-a-n-e plus a special string termination character called the null character write '\0'

So, name is a 5 character array.
